

EDITORIAL CAREER DOSSIER 2026

Freeman Paul Ipumbu

TECHNICAL DIRECTOR
TPTS NAMIBIA

Founder and CEO / SolarSpin Technologies
Founder and CEO / Runnerz Namibia
Co-Founder and CTO / RightMatch Namibia

WHK NA

WHAT I BUILD

I build systems that have to work beyond the pitch deck

My career began close to the infrastructure: national telecom operations, offshore ICT, enterprise systems, security, support and the documentation people need when something fails at 02:00. Today I lead technical direction at TPTS Namibia and build products through SolarSpin Technologies. I understand the real conditions, make the important decisions visible, test the failure edges and leave a system another person can operate.

I live this craft. I love the difficult parts. I keep going until the system holds.

Where I lead now

TPTS Namibia leads the present chapter. The founder work beneath it carries the same discipline into products, platforms and public proof that can survive contact with real operations.

TECHNICAL DIRECTOR

TPTS Namibia

5 October 2026 to present / Windhoek, Namibia

I lead technical direction for practical, secure financial technology. The remit covers solution architecture, engineering standards, security posture, delivery readiness and technical accountability.

Commercial and operating requirements become buildable systems, explicit controls, realistic gates and a handover another team can use.

MANDATE

01 Architecture and technical decisions

02 Security and engineering discipline

03 Delivery readiness and handover

FOUNDER OPERATING SYSTEM

FOUNDER AND CEO

SolarSpin Technologies

November 2025 to present

The company behind my independent products, research and selected client experiences. I direct product strategy, architecture, experience, delivery, security boundaries, testing and public case-study documentation.

FOUNDER AND CEO

Runnerz Namibia

August 2026 to present

A privacy-conscious running and walking network built around compatible pace, schedule, area and safety. I own the research, experience, architecture, Android delivery and release decisions.

CO-FOUNDER AND CTO

RightMatch Namibia

August 2026 to present

A controlled vehicle-access platform where identity, agreements, evidence, access, payments, recovery and disputes are treated as one trust system.

SELECTED BUILD EVIDENCE

SYSTEM	WHAT THE WORK PROVES
Anonymous fuel-retail platform	A controlled-pilot concept spanning wallet, station checkout, fleet rules, mixed baskets, zero fuel-points enforcement, reconciliation and an evidence trail.
Runnerz and RightMatch	Consumer products where privacy, identity, safety, agreements, access and recovery are architecture decisions, not policy added later.
ECC Command and operations systems	Emergency, aviation, maritime and air-medical concepts with controlled assignment, role assumptions, accountable actions and release gates.
Soek.lets, Tito On Call and Borizago	Namibia-first discovery, service booking, capacity rules, manifests, reporting and disciplined public and private source boundaries.

These systems sit at different stages across research, prototype, controlled pilot and live public experience. No project is presented as a production contract without formal approval.

OPERATING METHOD

01 Understand the real conditions	02 Frame the system	03 Test the failure edges	04 Ship with a handover
-----------------------------------	---------------------	---------------------------	-------------------------

A career built close to the infrastructure

Before the founder roles came national network operations, remote offshore support, enterprise systems, security, documentation and the hard work of leaving usable evidence behind.

PROFESSIONAL TIMELINE

20 JUL 2026 / 15 SEP 2026 Senior IT Systems Administrator The Free Press of Namibia, publisher of The Namibian Windhoek, Namibia	Developed the vendor evaluation, bill of materials and phased cutover plan for an approximately N\$366,000 migration from legacy HP switching to Ubiquiti UniFi across headquarters and remote sites. Moved credential governance from unsecured shared storage into a structured KeePass vault with more than 60 entries across nine access groups. Assessed backup coverage across more than 20 physical and virtual systems, designed phased Veeam and NAKIVO options, and began rebuilding infrastructure handover records. The work defined the gap and rollout path; it did not claim an organisation-wide implementation before departure.
DEC 2018 / JUL 2026 IT Support Engineer Namibian Underwater Technologies and Mining Windhoek and offshore	Delivered onshore and vessel-based support for critical infrastructure in remote environments where uptime, judgement and self-reliance mattered. Administered SonicWALL firewalls, strengthened company and vessel network security, managed the IT asset lifecycle and supported CCTV systems with external security providers. Wrote SOPs, cable layouts and technical records that made repairs and deployments more consistent across sites and vessels.
APR 2017 / SEP 2018 NOC Support Engineer L1 Paratus Telecommunications Windhoek, Namibia	Monitored a national ISP network with PRTG, SolarWinds and Wireshark in a 24-hour rotation supporting SLA-bound services. Configured customer-premises equipment across Juniper, Cisco and MikroTik. Diagnosed VPN, VLAN, MPLS and Ceragon microwave-link incidents using ARGUS, IRIS and M3MS.
2014 / PRESENT Independent IT Support Consultant and Tutor The Kinetic Group and Namibia Business Solutions Project-based	Provide practical IT support, troubleshooting, small-business technical guidance and one-to-one learning support alongside employed and founder roles. This work anchors the career timeline in hands-on consulting from 2014, before the first formal NOC appointment.

PUBLISHED RESEARCH

IT Handover Continuance A 2026 design science research study that treats handover documentation as a maintained continuity system, not a file produced once and forgotten. Continuance OS extends the work into an offline-first infrastructure-documentation concept.	PUBLISHED RECORD doi.org/10.5281/zenodo.21840440

The range behind the work

Technical leadership is strongest when architecture, operations, security, evidence and the human handover are designed as one system.

01 Direction and product Technical strategy, product discovery, system architecture, operating models, pilot design, stakeholder communication and realistic delivery gates.	02 Infrastructure and continuity Network and security operations, backup posture, disaster recovery, credential governance, documentation, SOPs and handover.	03 Engineering and evidence Full-stack web systems, Android, PWA, Cloudflare, D1, SQLite, role-based access, audit events, privacy, testing and technical writing.

EDUCATION AND CREDENTIALS

Education

BSc Honours in Computer Science and Information Technology

University of Namibia / 2011 to 2016

Diplomas in IT Management, IT Support and Digital Forensic Investigation

Alison e-Learning Academy / 2023

Namibia Senior Secondary Certificate

University of Cambridge, Academia Senior Secondary School / 2007 to 2008

Offshore and safety

STCW training through Maritime Safety Training and Development / 2019 to 2022

Security Awareness, Fire Prevention and Fire Fighting, Helicopter Underwater Escape Training, Medical and Elementary First Aid, Personal Safety and Social Responsibility, Personal Survival Techniques

Professional certifications

SECURITY AND GOVERNANCE

Fortinet NSE 3 Network Security Expert / 2026
ITIL 4 Fundamentals / 2023
ISO IEC 27001 ISMS Fundamentals / 2023
ISO IEC 42001 AI Management Systems / 2024
NIST Cybersecurity Framework Foundation / 2023

NETWORKS SYSTEMS AND SERVICE

CCNA Exploration, four modules / 2012 to 2014
CompTIA A+ 1000, Parts 1 and 2 / 2023
ISO 20000 ITSM Principles / 2023
COBIT IT Governance Foundations / 2023
SonicWALL Network Security Essentials / 2019
Windows Server Administration Fundamentals / 2023
Microsoft Office 365 for End Users / 2023

LANGUAGE SERVICE AND PERSONAL RECORD

LANGUAGES Oshiwambo, native English, fluent Afrikaans, fluent	SERVICE Video game competition organiser and consultant, NESA, 2016 to 2018 Regular blood donor, more than 10 donations since 2008	PERSONAL Namibian Code B driving licence Based in Windhoek
